

## GREEN COMPUTING ALTERNATIVES

The time to move towards sustainability is now. Many of today's technologies can help your company save money and reduce its environmental impact by deploying energy efficient network solutions.

### Our Green Computing Alternatives include:

- ▲ **Virtual Server & Desktop Solutions**
- ▲ **Desktop Alternatives - Thin Client**
- ▲ **Paperless Office/Document Management**

#### **Make the most of your resources.**

Virtualization improves the overall management of your IT infrastructure, provides scalability that enables your business to easily expand capacity when needed, and simplifies the process of deploying new hardware and software solutions, saving both time and money.

#### **Streamline system management and lower costs.**

Thin clients offer a low cost, low maintenance option to manage your servers. With a thin client, the server(s) holds all the applications, services, and data, providing centralized storage and backup, and resulting in better security. Thin clients are especially ideal for schools and businesses that need to maximize the number of workstations they can purchase on a fixed budget.

#### **Reduce paper waste and increase efficiency.**

Give your staff fast, easy access to all of your business's information and knowledge – from word processing files and spreadsheets, to emails, scanned documents and even voice mails – virtually anything that can be stored as a file. Accounteks Consulting can implement a document management system that will organize data and enable version control while reducing the costs associated with storing paper documents and searching for or replicating unfound documents.

### Right-Sized Solutions

Our solutions are always “right-sized” to fit the specific needs of our clients' businesses, delivering the performance, reliability and peace-of-mind our customers depend on to manage their businesses.
